ABOUT US

Founded in 1994 by Jonas Zucchi, Zucchi Luxury Stones is **one of Brazil's leading natural stone exporters.**

The company operates a modern industrial park equipped with state-of-the-art machinery and automated processes, supported by continuous **investment in equipment, technology, marketing, research, and development.** These pillars have shaped the company into a reference that constantly challenges itself and reinvents its approach.

Today, Zucchi operates four factories. Two are dedicated to quartzite and crystal processing, one is specialized in dolomitic marble, and one is dedicated exclusively to marble, being the first facility in the Americas focused on this type of material.

Zucchi's purpose is to **connect people to nature** through the timeless beauty of natural stone. The portfolio includes a wide range of **premium materials** such as **quartzites, crystals, dolomitic marbles, semi-precious stones, marbles, and granites.**

Zucchi is the world's largest producer of **Taj Mahal** quartzite, the best-selling quartzite in the world, and a global reference in quartzite production, with internationally recognized quality.

CURATION AND VARIETY

Rigorous block selection and quality control at every stage.

SUPERIOR QUALITY

High-end processing supported by advanced technology and production efficiency.

STRATEGIC PARTNERSHIPS

Long-term relationships with leading players in the market.

INNOVATION WITH RESPONSIBILITY

Full automation, responsible processes, and a focus on continuous improvement.

DISTINCTIVE PORTFOLIO

More than 100 materials with broad aesthetic diversity and natural variation.

SCALE WITH CONSISTENCY

High industrial capacity while maintaining technical and aesthetic standards.

QUARTZITES

The hardest and most luxurious stone of the market. Quartzite is a non-foliated metamorphic stone that was originally pure quartz sandstone.

Sandstone is converted into quartzite through heating and pressure usually related to tectonic compression within orogenic belts.

It is currently the best option for durability out of all natural stone.

The biggest producer of quartzite.

The biggest producer of Taj Mahal.

The hardest and most durable material in the market.

QUARTZITE COMPOSITION

Quartzite is a metamorphic rock predominantly composed of quartz, with a concentration of at least 95%.

Its composition may include a variety of secondary minerals, such as sericite, iron hydroxides, among others, resulting in natural variations in color, patterns, and textures.

These characteristics make quartzite a unique and versatile choice for various applications.

Allure

Allure is a **solid hard quartzite** with a very special color tone not found similar in any other natural stone to this date.

A very **contemporary blue, silver and platinum background tones with remarkable white webs running through the slabs.**

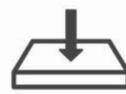

It became a **successful hit** since its discovery and launch in the market.

It has been extensively used for luxurious and contemporary flooring, wall panels and countertop applications.

Amazonic Green

In the heart of Bahia, a region renowned worldwide for its emeralds, Amazonic Green was born.

This quartzite showcases **vibrant green hues and natural veins of crystal and black tourmaline.**

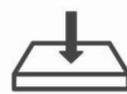

Reflecting the land's richness, where minerals become art.

Mined from a land known for its **pure emeralds**, it stands as a tribute to Brazil's biodiversity and mineral wealth.

Arturo Blu

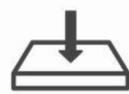

Arturo Blu is a rare quartzite distinguished by its exotic fusion of color and crystalline movement. **Layers of blue, teal, and mineral-rich tones flow organically across the surface, creating a composition that feels vibrant, expressive, and truly one of a kind.**

Its uniqueness lies in its **crystalline structure, a block largely formed by visible crystals**, enriched by the remarkable presence of fuchsite, which lends subtle luminosity and depth. The result is a powerful yet refined material, ideal for statement applications where color, rarity, and natural artistry take center stage.

DOLOMITES

Dolomite is a calcium magnesium carbonate, and magnesium is well known as a natural acid neutralizer.

A material is classified as dolomite when 50% of its weight is composed of this mineral. So, the higher this percentage, the harder the stone is.

Therefore, marbles with high dolomite content are more resistant to being affected when in contact with acidic elements, such as lemon juice, and wine, among others.

The most sophisticated and luxurious type of marble.

They are a hard marble: making them very resistant.

They are taking the architecture and design industry to a new level.

DOLOMITE COMPOSITION

Dolomitic marble is a carbonate metamorphic rock primarily composed of dolomite, making up more than 95% of its composition, with smaller amounts of quartz, which provides greater resistance, along with traces of other minerals such as pyrophyllite, muscovite, among others.

Aragonita

Aragonita is a dolomitic marble that transcends the very definition of natural beauty, revealing a radiant purity that makes it truly unique. **The exceptionally white background, almost ethereal, is interrupted by subtle veins that, in their softness, form expressive lines, revealing the grace and lightness of the material.**

This material draws attention not only for the aesthetics it offers, but also for the singularity it holds. There is nothing else on the market like Aragonita. It is a masterpiece of nature, unparalleled and without equal. The dolomitic composition of Aragonita ensures strength and durability, essential characteristics for high-end spaces, where every detail must reflect refinement and luxury.

MARBLES

A versatile and ancient stone. Marble has been used for art, architectural projects, and decoration since ancient times - according to historical records.

Marble is a metamorphic rock composed of recrystallized carbonate minerals, most commonly calcite or dolomite. It is typically not foliated, although there are exceptions.

Marble is commonly used for sculpture, building material, and home/kitchen applications.

Beauty like no other.

Indisputable Quality.

100% Automated Marble Factory.

MARBLE COMPOSITION

Marble is a metamorphic rock primarily composed of carbonate minerals, such as dolomite, which represents about 95% to 97% of its composition, with small amounts of quartz and other accessory minerals.

This composition results in its classic appearance, characterized by color variations, with white being predominant.

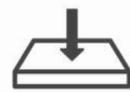

Namib Bianco

Namib Bianco is a highly uniform Namibian marble with a **bright white base softly brushed by delicate taupe-beige streaks**. The gentle, linear movement adds an airy calm to countertops, walls, and floors, perfect for **minimalist and contemporary spaces**.

Fine grain and low porosity offer dependable durability and easy upkeep. Specify Namib Bianco when you need pristine brightness with a subtle touch of natural texture.

GRANITES

Granite is a common type of felsic intrusive igneous stone that is granular and phaneritic in texture.

It can be predominantly white, pink, or gray in color, depending on their mineralogy.

Commonly the term “granite” is used to refer to a wider range of coarse-grained igneous rocks containing quartz and feldspar.

Classic, resistant and everlasting

Best cost on the market

High volume of production

GRANITE COMPOSITION

Granite is an intrusive igneous rock composed mainly of quartz and biotite, along with various accessory minerals, such as muscovite, chlorite, among others.

These substances are responsible for its color variations and characteristic appearance.

Amazon

It's an **amazing and almost undefinable stone**. Amazon is different than anything ever seen. A true expression of nature's most majestic artworks.

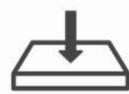

Its structure is **composed of a rare homogeneous grouping of quartzite, schist, and granites**. A magnificent material to play with different textures like **brushed and leather finishes**.

Every block reveals a unique movement, a unique story as painted by its veins and colors. A fresh and sophisticated spectacle of nature.

Black Soap Stone

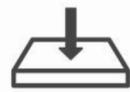

Black Soapstone reveals a quiet, evolving beauty in every condition. In its natural dry state, it presents a soft, matte surface enriched by delicate white veining and subtle movement. When touched by water or enhanced by it, its tone deepens into an intense, velvety black, creating a striking contrast that feels rich and dynamic.

Silky to the touch and inherently refined, Black Soapstone carries a timeless character defined by depth and authenticity. Its smooth texture and understated elegance make it a material that responds to light, touch, and time, embodying quiet strength and enduring sophistication.

Matrix

Matrix is unmistakable, a stone defined by individuality and bold character. **Its dark silver and deep black tones unfold through layered textures, natural fissures, and metallic nuances that give the surface remarkable depth and dimension.**

As a **schist**, Matrix offers **unique surface possibilities** that cannot be replicated in other materials, allowing for finishes and design concepts that are truly exclusive to it. Raw yet sophisticated, it carries an almost otherworldly presence, a stone that feels sculpted from another dimension, made for projects that demand authenticity, texture, and undeniable personality.

Metalicus

Metalicus is true to its name and nature, a **granite with a striking metallic presence and unmistakable character**. Its **predominantly black, brown, and silver tones shimmer subtly under light**, occasionally revealing rare golden flames that add warmth and dramatic contrast to the surface.

Dense and durable as expected from granite, Metalicus also stands out for its **dynamic texture and depth**. It allows for a variety of surface and edge finishes, enhancing its natural movement and contemporary appeal. Bold and expressive, it is a material designed for projects that demand strength, personality, and architectural impact.
